

Names: \_\_\_\_\_

Future Evolution play sheet - *make your prediction about evolutionary change in the space below*

Species: \_\_\_\_\_ Trait predicted to evolve: \_\_\_\_\_

What change will occur in this trait over time?	What environmental factor(s) might drive this change?

*When you are done with this side, clip it to the whiteboard and take another group's sheet to perform the "analysis" on the opposite side — DO NOT ANALYZE YOUR OWN PREDICTIONS!*

Names: \_\_\_\_\_

*Analyze the other group's prediction made on the opposite side.*

*Check off the appropriate box and provide the appropriate explanation in the space below.*

- This prediction is **feasible** (describe an evolutionary scenario that would produce this change)
- This prediction is **NOT feasible** (explain why this change is unlikely to be caused by evolution)
- This prediction is **too vague** (explain why you don't have sufficient information to analyze)
